TITANARB

THE BEGINNER FIELD GUIDE

SUREBET BASICS.

A simple guide to price gaps, real-world execution and hands-free automation.

THE IDEA

Same match. Different prices. Cover every outcome at compatible terms.

FROM MANUAL SIGNALS TO HANDS-FREE AUTOMATION.

Chelsea vs Manchester United example inside.

START HERE

WHAT IS A SUREBET?

A surebet is a price difference that may allow every possible outcome to be covered.

STOP GUESSING THE WINNER.

*Instead, compare prices for opposite outcomes in the **same market**. A theoretical gap can appear when the numbers line up.*

SINGLE BET

ONE PICK.

Choose one outcome and hope the prediction is correct.

SUREBET SETUP

BOTH SIDES.

Cover all possible outcomes using matching market rules.

EXAMPLE MATCH

CHELSEA VS MAN UNITED

*We will use the two-outcome question: **Will both teams score? YES or NO.***

THE NUMBERS

CHELSEA VS MAN UNITED

Illustrative odds only: both teams to score (YES / NO). Not live prices.

TOTAL CAPITAL ACROSS BOTH SIDES **$100**

BET365 • ILLUSTRATION

BOTH TEAMS TO SCORE: YES

2.10

STAKE	$50
IF THIS WINS, RETURN	$105

STAKE • ILLUSTRATION

BOTH TEAMS TO SCORE: NO

2.10

STAKE	$50
IF THIS WINS, RETURN	$105

EITHER YES OR NO WINS

$105 RETURN - $100 STAKED

= $5 THEORETICAL GROSS

BOOKMAKER EXAMPLE ONLY: Bet365 and Stake illustrate the maths. ***TitanArb does not execute trades at traditional sportsbooks.*** *Real fees, liquidity and fills matter.*

MAKE IT SIMPLE

FOUR SIMPLE STEPS

Here is how to evaluate the Chelsea vs Manchester United illustration.

01 SAME EVENT

Chelsea vs Manchester United, with identical market terms.

02 TWO COMPLETE OUTCOMES

"Both teams score: YES" and "Both teams score: NO".

03 COMPARE THE TOTAL STAKE

$50 on YES plus $50 on NO equals $100 committed.

04 CHECK BOTH POSITIONS

Either winning side returns $105 if both positions fill.

*IMPORTANT: Chelsea vs Man United can end in a draw. That is why this illustration uses **YES/NO** for both teams scoring, not "Chelsea wins vs United wins".*

THE DIFFERENCE

SIGNALS VS AUTOMATION

Manual tools send alerts. TitanArb aims to automate eligible trade execution.

MANUAL SIGNAL TOOL

FIND A SIGNAL

1. Tool flags a price gap
2. You read the alert
3. You open the markets
4. You place each trade

TITANARB

AUTOMATE THE FLOW

1. System scans the markets
2. Checks configured rules
3. Attempts eligible trades
4. Shows execution results

BUILT FOR HANDS-FREE MONITORING

*Users fund their custodial account. TitanArb then works in the background to scan markets and attempt **qualifying trades**, without asking users to place every position manually.*

Trade execution remains conditional; automation cannot guarantee profits or prevent losses.

THE TITANARB WORKFLOW

HOW TITANARB AUTOMATES

Fund your TitanArb account. The system scans and attempts eligible trades.

CREATE & FUND ACCOUNT

Create an account and deposit funds into your custodial balance.

SCAN DECENTRALIZED MARKETS

Monitor supported sports and prediction-market prices.

CHECK THE FULL OPPORTUNITY

Assess outcome coverage, liquidity, prices and trading costs.

ATTEMPT AUTOMATIC EXECUTION

Submit eligible trades when configured conditions are met.

REVIEW ACTIVITY

See trade attempts, fills and results in the execution feed.

DECENTRALIZED MARKETS ONLY

azuro · THALES · BETDEX · Polymarket

Market availability depends on supported integrations. No Bet365 or Stake execution.

QUICK REFERENCE

THE SUREBET CHEAT SHEET

Remember these four terms when comparing opposite outcomes.

ODDS

Price used to calculate the potential payout.

STAKE

Amount committed to one position.

PAYOUT

Amount returned by a winning position.

HEDGE

Position intended to cover a different outcome.

THE KEY THINGS TO REMEMBER

- *All outcomes must be covered*
- *Compatible settlement rules*
- *Real execution costs still matter*
